Reference for

Mr Josiah I Uma

To whom it may concern.

I have supervised Mr. Mr Josiah I Uma final year project. Josiah has done an excellent project for which he was awarded a 1st. The project, suggested by Josiah, consisted of a word game to be implemented on the android platform. The game is well designed and free from any significant bug which is already a good achievement for a student's project. In fact it is so well designed that I have been using it recreationally and enjoyed playing. The project doesn't contain very challenging algorithmic, however it demonstrates Josiah ability to follow software engineering principles throughout specification, design, coding and testing so to deliver a good software product; it also demonstrate his ability to learn new Java software tools relevant to mobile platforms. It is very rare that a project get a first when there is no very challenging algorithmic but in this case the examiners were satisfied that the software engineering and usability aspects was so good that on balance a first was the right decision.

I also found Josiah to be a motivated, mature and professional student who is able to engage in intelligent conversation and is able at problem solving.

I am hence very supportive of his application for a Masters course.

Your Sincerely,
Pasquale Malacaria
